Project 3 - Data guide

DASC 3230

1. HTRU2

File: `htru2_small.npz`. Each row is a radio-signal candidate from the High Time Resolution Universe survey, described by four precomputed features. Labels: 0 = background (non-pulsar), 1 = pulsar.

Feature column, in order	Description
profile_mean	Mean of the integrated pulse profile
profile_std	Standard deviation of the integrated pulse profile
dm_snr_mean	Mean of the DM-SNR curve
dm_snr_std	Standard deviation of the DM-SNR curve

Main arrays	Rows	Background	Pulsar
X_train, y_train	1,650	1,500	150
X_calibration	400	400	0
X_test, y_test	900	800	100

2. Fashion-MNIST

File: `fashion_small.npz`. Images are 28 x 28 grayscale product images, stored as uint8 values from 0 to 255. Each image has one label.

Labels: 0 = T-shirt/top, 1 = Trouser, 2 = Bag.

Main arrays	Images	Per class
images_train, labels_train	1,200	400
images_val, labels_val	300	100
images_test, labels_test	600	200

Train/validation: official training set. Test: official test set.
